Proprietary A/D

Dual interval measurement with two different scan intervals

Users have the ability to choose two different scan intervals on a single GM system. This allows users the flexibility to measure various types of inputs with two different scan intervals in a single system.

For example, this provides for efficient, simultaneous measurement of signals with slow fluctuations such as temperature, and fast-changing signals such as pressure and vibration. Modules can be assigned to measurement groups.

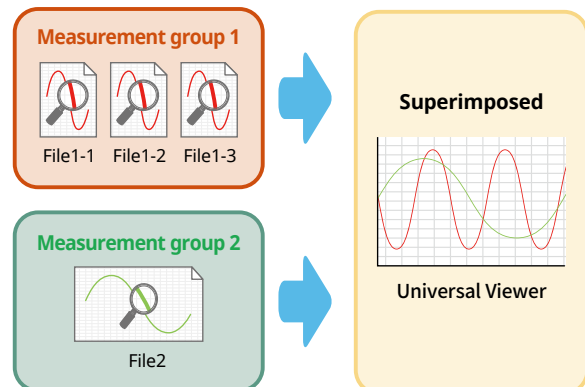

2 measurement groups

The figure above shows 2 measurement groups by color.

Superimpose data on Universal Viewer

With Universal Viewer, you can superimpose measured data from 2 measurement groups.

MATH (including reports), and event actions

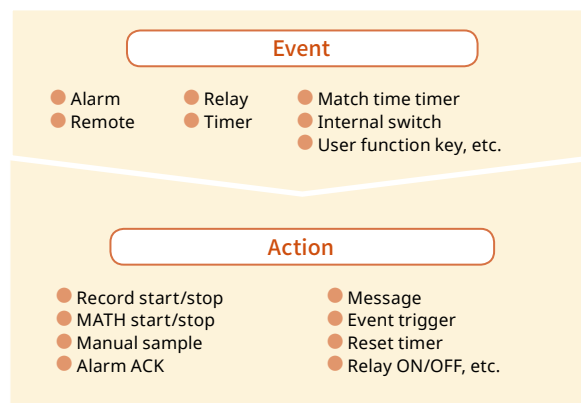

MATH function (/MT option)

Supports various kinds of math computation, including basic math and functions (square root, logarithms, trigonometry). Write formulas using variables for measured or computed data and save or display the results—this saves time and effort on post-processing. Create hourly, daily, monthly, and other reports with the Report function.

Provides a variety of convenient networking functions

Networking

Modbus/TCP and Modbus/RTU Communications

GM supports Modbus TCP/IP client and server modes for Ethernet communications and Modbus RTU master and slave modes for optional serial communications.

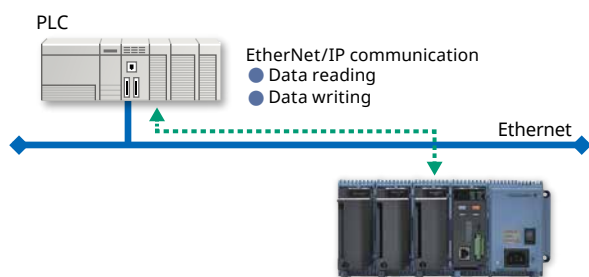

Modbus/TCP (Ethernet connection), Modbus/RTU (RS-422/485 connection)

EtherNet/IP Function (/E1 option)

GM supports EtherNet/IP server functions. You can access GM from PLCs or other devices and load measurement/MATH channels or write to communication input channels* (GM10-1: up to 300 ch, GM10-2: up to 500 ch).

* Communication channel function (/MC option) is required.

CC-Link family SLMP communication (/E4 option)

Protocol function that enables connection from a GM to Mitsubishi Electric PLCs without sequencer programs. The GM can run as the SLMP client to write to a GM measured data PLC, or PLC data to communication channels*.

* Requires the communication channel option (/MC option).

Data acquisition on power measuring instruments (/E2 and /MC options)

Acquire precise digital data on the GM by digital communication connectivity to a power measuring instrument (WT series power analyzers) and record it along with the GM's measured data. Since it records a device's power consumption, temperature, and other phenomena at the same time, the GM is ideal for performance evaluation testing.

Models that can be connected

Yokogawa Meters & Instruments Corp.
WT1800/WT1800E (command type WT1800), WT500
WT300/WT300E (command mode WT300)

Max. no. of connections 16

OPC-UA Server (/E3 option)

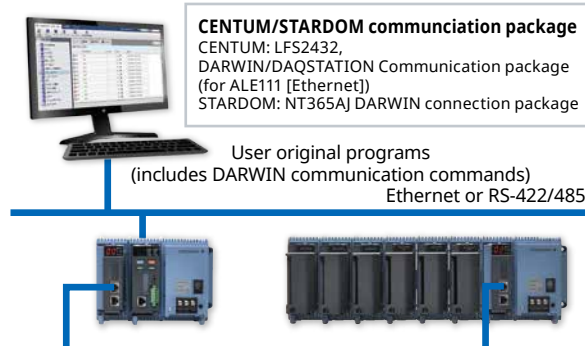

Data acquired by the GM can be accessed through Ethernet communication from a host system (OPCUA client). Writing from upstream systems to GM communication channels requires the communication channel function (/MC option).

Comes with communication functions that are compatible with the DARWIN data acquisition unit

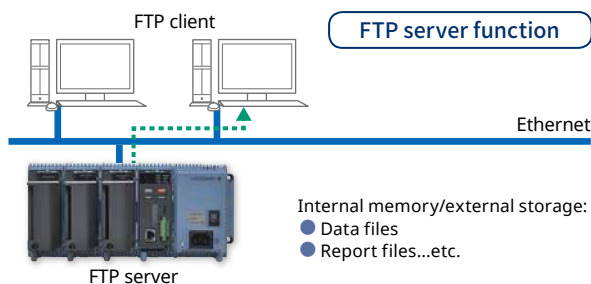

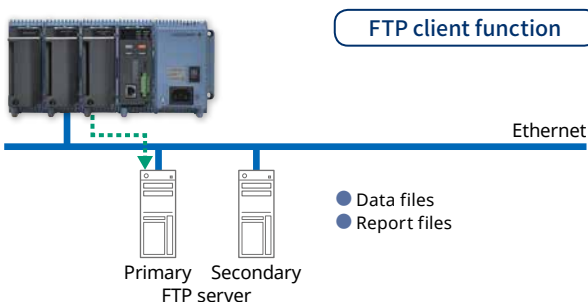

The GM supports DARWIN communication commands. Use your current DARWIN communication programs as-is on the GM. It's easy to switch from an existing DARWIN unit.

* See your dealer or nearest Yokogawa representative for details.

FTP-based file transfer

The FTP client/server functions allow you to easily share and manage data from a centralized file server

E-mail messaging function

The GM can send a variety of informative e-mail messages that include alarm notification reports, periodic instantaneous data values, scheduled report data and other information.

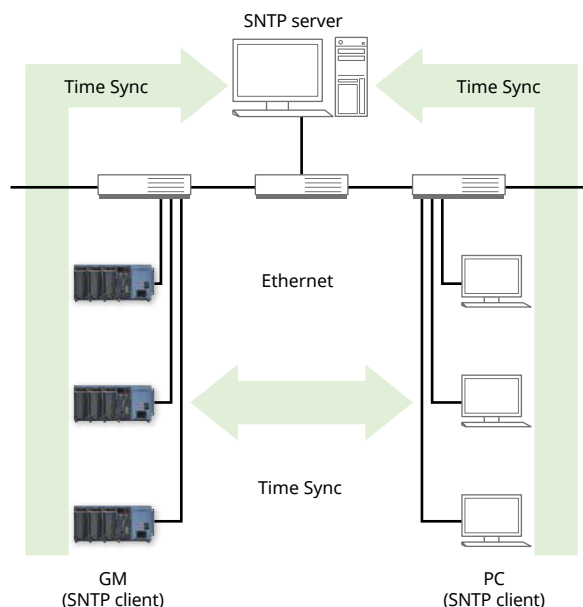

Sending e-mail using an existing mail system

In this type of setup, e-mail messages are sent through an existing mail server (SMTP server).

Time synchronization with network time servers

GM uses SNTP protocol in client mode to acquire time information from a network time-server. This function allows any number of GM units within a facility to have precisely synchronized time; all units will record data with coordinated date and time stamp information. In addition, GM can function as a server, providing time data to other SNTP client units on the network.

Automatic network setup (DHCP) function

Using Dynamic Host Configuration Protocol (DHCP), the GM can automatically acquire the settings it needs (IP address) for network communications from a DHCP server. This makes it easier than ever to install the unit on a plant network.

Rock-solid hardware and highly secure

Reliability and durability

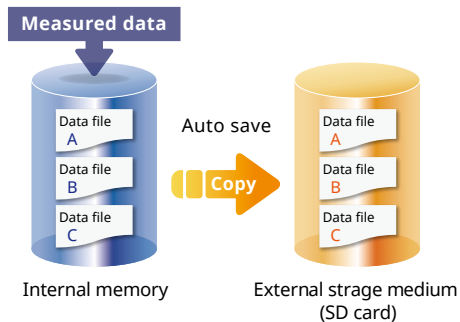

Be confident that recorded data is saved

Supports long-duration and multichannel recording. Measured data is always stored to internal memory, and data is transferred to external storage media at regular intervals. Redundancy can be achieved by sending data to a server with the FTP client function. Securely saves measured data even in the event of a sudden power loss.

Approximate sample time

Number of recording channels	Total sample time
30	Approx. 71 days
100	Approx. 23 days
300	Approx. 7 days

With an internal memory of 1.2 GB and recording interval of 1 sec.

Select file formats according to your application

For increased security, measured data can be saved in binary format. This format is very difficult to decipher or modify in traditional text editors or other programs. To enable easy and direct opening of the data in text editors or spreadsheet programs, choose text format. This allows you to work with your measurement data without dedicated software.

- SMTP client
- FTP server
- HTTP server

Digital signatures

- Add electronic signatures to records (PDF)

SSL: An encryption protocol for data sent over TCP/IP networks.

21 CFR Part 11 support (/AS option)

Data Logging Software GA10 (sold separately)

Centrally acquire data from multiple devices on a PC

GA10 is a PC based software package that acquires real time data from SMARTDAC+ data acquisition systems and other devices connected to a network. Connected PCs can monitor real time and historical data, which can be stored on a PC harddrive or centrally on a network drive.

Max. connectable units: **100**
Max. recording tags (channels): **2,000**
Scan interval: **100 ms** (channels)

Compatible with other models in addition to the GM!

GP10/GP20

WT series (power analyzers)

Supports many other models. For details, see the GA10 catalog.

Aggregate data for monitoring!

Easy to read screen layouts provide operator friendly real time monitoring.

- Group channels any way you like
- Play back data up to recording start, even during measurement
- Instantly recognize alarms (in red)

Save the data all together!

Binary

Excel

Data is stored in a binary tamper proof format preventing unauthorized access. Data can also be exported to excel format for data manipulation and analysis.

Application example

Data monitoring in manufacturing sites

Monitor factory data from the office.
You can also add clients and share data across multiple PCs.

Effect: No more moving around large factories to do work!

Recording data from multiple equipments

Saves testing/manufacturing equipment data on a PC. In addition to simultaneous acquisition, you can acquire data from different equipment at different timing (multilogging).

Effect: Manage all data on the PC, one set of equipment at a time!
