LEADING-EDGE, SAFETY-ENHANCED OXYGEN GAS ANALYSIS FOR THE MOST HAZARDOUS AND CHALLENGING APPLICATIONS

FLEXIBLE

- Can be used in Safe Area to Zone 1/Division 1 hazard rated locations
- Intelligent diagnostics and flow sensing
- Optimized for hazardous applications like safety critical oxidation, feedstock clean up, blanket inerting and flare stack analysis

EASY TO USE

- Intuitive, engineer-friendly use and interaction
- No need for a sample conditioning system for samples with a dew point of <50°C/122°F
- Unique FlowCube sensor technology provides unrivalled reliability and accuracy
- Intelligent pressure compensation for barometric and sample vent back pressure variations

LOW COST OF OWNERSHIP

- No need for reference gases/purge gases during operation including use with flammable samples
- Long calibration intervals and cell life
- Auto-validation reduces hands-on maintenance needs

UNRIVALLED PERFORMANCE

- Uses industry-leading patented Paramagnetic technology for stable, non-depleting measurement
- Manufactured by Servomex - over 60 years’ experience innovating and pioneering gas analysis, and thousands of units used in the field every year

BENCHMARK COMPLIANCE

- IECEx / ATEX: Ex ia d IIC T4 Gb for Zone 1, and CSA UL C1, D2 Groups A, B, C, D T4
- SIL2 hardware compliance, without compromising reliability (functional safety manual available)

SERVOTOUGH
Oxy 1900

The award-winning Oxy sets the standard for O₂ gas analysis, delivering an intelligent, feature-rich solution designed to meet the monitoring needs of even the most challenging applications.

At the heart of the Oxy is Servomex’s patent Paramagnetic oxygen sensor. Providing highly reliable, accurate and stable percentage measurements of oxygen. The non-depleting technology requires minimal calibration and never needs replacing - ensuring a long lifetime of ownership with low maintenance costs.

This analyzer combines enhanced-safety design aspects with ease of use and installation, creating an analytical solution that can reduce costs dramatically over product life. With clever, value-added features including a heated sample compartment for unrivalled measurement stability and simplified sampling, the Oxy leads the market and sets the standard for hazardous area O₂ monitoring.

TOTAL SAFETY IN THE MOST DANGEROUS LOCATIONS

When you work with potentially dangerous, hazardous area applications, you need an O₂ analytical solution that delivers benchmark safety compliance and complete reliability without question; product quality and plant safety depend on the equipment you integrate.

The Oxy has ATEX Cat. 2, IECEx Zone 1 and CSA Class 1, Div. 1 certification and is SIL2 compliant, ensuring it offers solid, trusted reliability in hazardous areas.

LOW MAINTENANCE, LOW COST OF OWNERSHIP

By utilizing patent Paramagnetic sensing technology, the Oxy benefits from a stable, accurate measurement that requires minimal calibration. Remote device interaction via digital communication options help to further reduce operational costs.

HIGH PERFORMANCE MONITORING WITH UNIQUE FEATURES

The Oxy introduces three unique options that offer unrivaled flexibility, operational performance and reduced costs. An innovative heated sample bulkhead, when coupled with the fully heated sample compartment, can remove the requirement for a sample conditioning system on samples with a dew point of up to 50°C/122°F and also offers excellent measurement stability; a unique FlowCube sensor which guarantees low flow indication during normal operation; and an integrated pressure compensation system compensates for sample pressure variation, enabling tighter process control.

ALTERNATIVE PRODUCTS

The SERVOTOUGH and DF range offer alternative options for oxygen analysis, including:

**OxyExact 2200**

When you need ultra-sensitive O₂ monitoring of flammable gases, choose the OxyExact; this device features three enclosure systems allowing sampling from 0-1% to 0-100% O₂ with pressures of up to 30psi in hazardous area locations.

**DF-300**

When trace and ultra-trace O₂ analysis is needed, the DF-300 series provides a feature-rich solution in an intelligent digital format. This device’s coulometric E-sensor provides no drift or false low readings, helping to extend calibration periods.

KEY APPLICATIONS

- Process control
- Safety critical oxidation, such as ethylene oxide and propylene oxide purity
- Feedstock clean up
- Inerting/blanketing
- Flare stack analysis
- Vapor recovery

*Oxy not suitable for O₂ enriched samples.*
SAMPLE FOR MEASUREMENTS

**Sample gas**
The sample gas must be clean, non-corrosive and free from oil and condensates.

**Flow control**
Standard: 50 – 250ml/min (200ml/min recommended). Optional high flow internal bypass: 50-70l/h (60l/h recommended)

**Sample inlet connection**
¼” NPT female, 6mm tube or ¼” tube

**Sample wetted material**

**Sample vent pressure**
Standard flow – 124kPa absolute (18psi absolute)
High flow – 122.8kPa (17.8psi absolute)

**Maximum inlet pressure**
Standard flow – 0.2kPa (0.03psi)*
High flow – 1.4kPa (0.2psi)*

*relative to sample vent pressure
